

TAXI APP

Aim-

To create a taxi app using figma tools

Procedure-

- Create a new frame for your app's main screen (e.g., 375x812px for a mobile view).
- Design the user interface (UI) by adding elements like a map, ride options, and buttons using the **Rectangle**, **Text**, and **Vector** tools.
- Use **Auto Layout** to organize components like buttons, headers, and lists for responsiveness.
- Add interactivity by creating multiple frames for screens like booking, payment, and confirmation.
- Prototype the app by linking frames together with interactions and transitions using Figma's **Prototype** tab.

Result-

Successfully the Taxi app has been created.
